## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 4\_COD\_Question 3

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

### 1. Problem Statement

Write a program to implement a queue using an array and pointers. The program should provide the following functionalities:

Insert an element into the queue. Delete an element from the queue. Display the elements in the queue.

The queue has a maximum capacity of 5 elements. If the queue is full and an insertion is attempted, a "Queue is full" message should be displayed. If the queue is empty and a deletion is attempted, a "Queue is empty" message should be displayed.

## Input Format

Each line contains an integer representing the chosen option from 1 to 3.

Option 1: Insert an element into the queue followed by an integer representing the element to be inserted, separated by a space.

Option 2: Delete an element from the queue.

Option 3: Display the elements in the queue.

#### **Output Format**

For option 1 (insertion):-

- 2. "Queue is full." if the queue is already full and cannot accept more elements.

  For option 2 (deletion):-

- 1. The program outputs: "Deleted number is: <data>" if an element is successfully deleted and returns the value of the deleted element.
- 2. "Queue is empty." if the queue is empty no elements can be deleted.

For option 3 (display):-

- 1. The program outputs: "Elements in the gueue are: <element1> <element2> ... <elementN>" where <element1>, <element2>, ..., <elementN> represent the elements present in the queue.
- 2. "Queue is empty." if the queue is empty no elements can be displayed.

For invalid options, the program outputs: "Invalid option."

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 1 10

```
24,180,10,10
                                                      241801076
Output: 10 is inserted in the queue.
     Elements in the queue are: 10
     Invalid option.
     Answer
     #include <stdio.h>
     #include <stdlib.h>
     #define max 5
                                                                                 24,180,1076
     int queue[max];
     int front = -1, rear = -1;
   // You are using GCC
 int insertq(int *data)
     { if(rear==max-1)
       return 0;
     }
     if(front==-1){
       front=0:
     }
     rear++;
                                                                                 24,180,1076
     queue[rear]=*data;
     return 1;
     int delq()
       if(front==-1||front>rear){
         printf("Queue is empty.\n");
         return 0:
       printf("Deleted number is: %d",queue[front]);
